## YWCB300 Mobile Stabilized Soil Mixing Plant

### MOBILE STABILIZED SOIL MIXING PLANT FOR EASY MOVING FROM SITE TO SITE

---

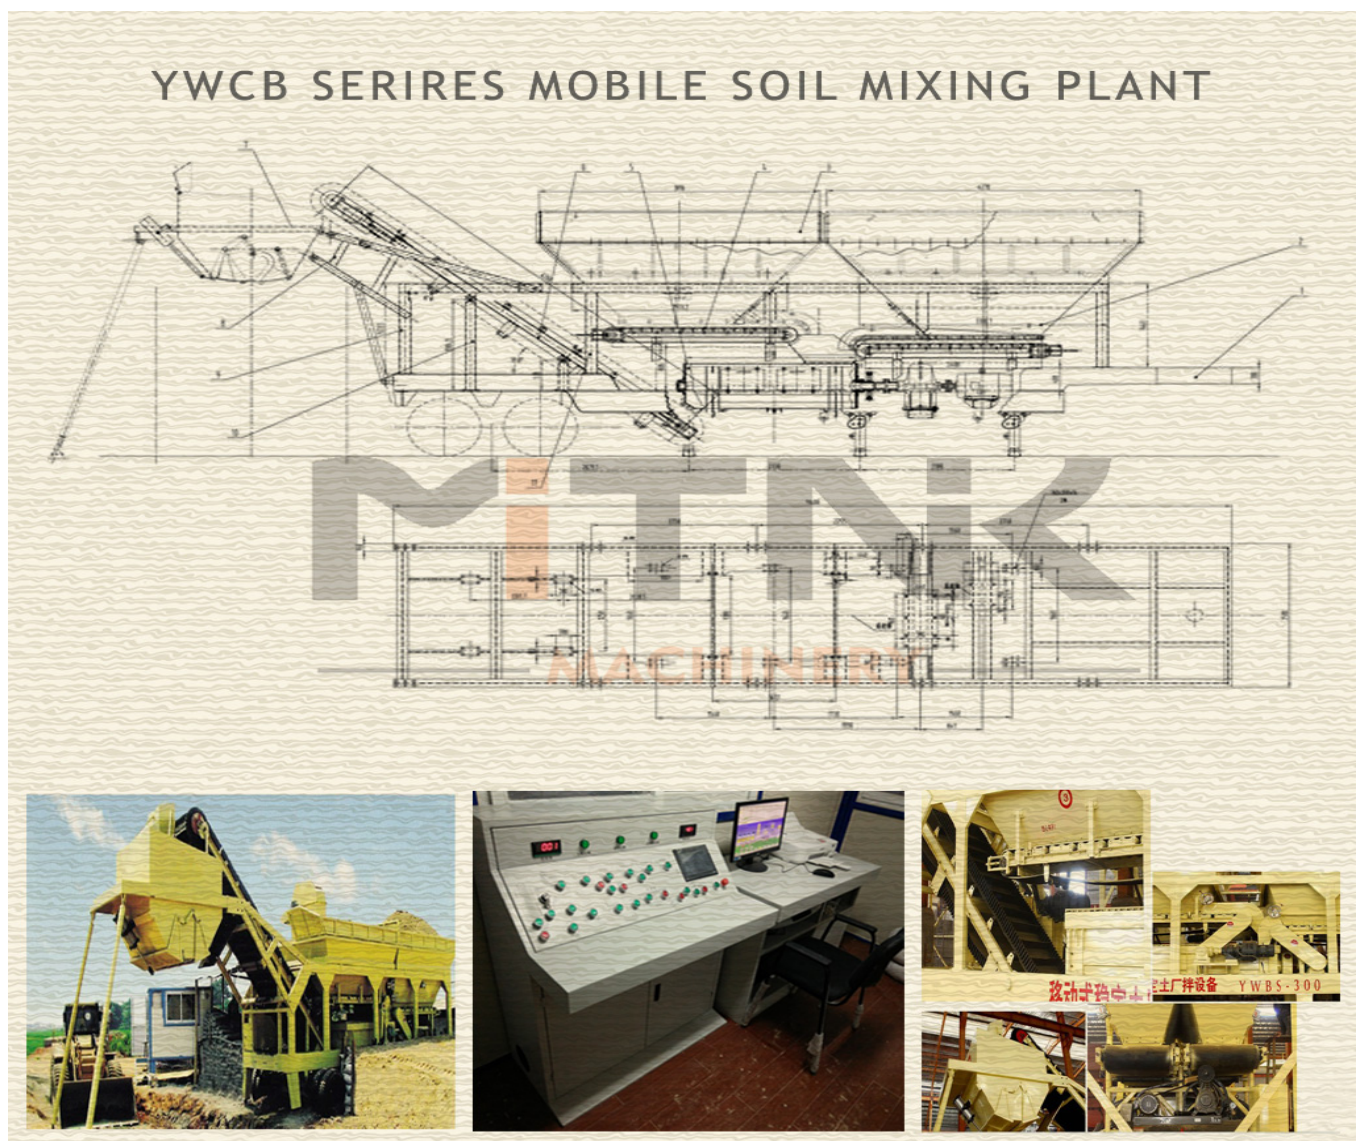

YWCB300 MOBILE STABILIZED SOIL MIXING PLANT is our company new design according to soil stabilizer factories mixes many years experience and the domestic and foreign advantages technology development which equipment suits to the actual situation with new integral-type stabilizer soil mixing equipment. Mobile soil mixing equipment is suitable for many kinds of materials proportions, its aggregate batching system uses the frequency conversion velocity modulation technology, can stabilize continuously offer the stone, the soil, the pulverized coal ash and so on many kinds of foundation material, both enhanced the aggregate batching speed and the stability, and can control the ingredient quantity accurately, has satisfied the first-class highway construction standard request.

The complete set of soil mixing machine function module uses the mobile type design, the available trailer tractor hauling shift, the area is small, the installment is quick, easy operation. Its double motors and with twin shaft continuous type mixer, the design reasonably, the agitation even, the work is reliable. The YWCB300 mobile soil mixing plant is the railroad (country railway transportation special line, high-speed railroad), the road, the municipal administration, the airport, the dam and so on the large-scale infrastructure project stabilizer soil basic unit construction ideal equipment.

THE ADVANTAGES OF THE MOBILE STABILIZED SOIL MIXING EQUIPMENT:

1. The adaptable for the material, in accordance with the requirements of different construction can be graded mixing of different materials.
2. The ingredients of high precision. Using the intelligent electronic belt scale, cement spiral scales, frequency conversion control and other advanced technology, for all kinds of material feeding high precision automatic continuous electronic weighing measuring ingredients.
3. Conventional batching machine is equipped with vibration motor, can reduce the bonded materials, to ensure material supply smoothly.
4. Powder supply system adopts the fully closed structure, avoid the powder float in the sky.
5. This machine is good performance, flexible, cover an area of an area small, easy to operate, easy to move.
