
European Style PFW Impact Crusher

MITNIK EUROPEAN STYLE PFW IMPACT CRUSHER

MITNIK PFW series of Impact Crusher with the advanced world standard, and our PFW series of impact crusher improves the adjusting device and is easy to be operated. The rotor of PFW IMPACT CRUSHER is the key part of the crusher and also the most critical part of inspection and acceptance, our company develops and produces the strong and heavy type rotor in order to get the higher rotary inertia. The use of high abrasion-resistant material and the best design of the crushing chamber make the performance of the crusher more remarkable.

The design of three chamber crushing makes the PFW crusher perform well in the fine crushing and superfine crushing operation, and the design of the two chambers simplifies the flow chart of coarse crushing operation.

PFW Impact Crusher

【Capacity】:15-450 t/h

【Feed Size】: ≤ 200- ≤ 550 mm

【Power】:45-250KW

【Application】:It is widely used in metallurgy, mining, chemical, cement, construction, refractory materials and ceramic industries for fine grinding.

Advanced technology, optimize the design:

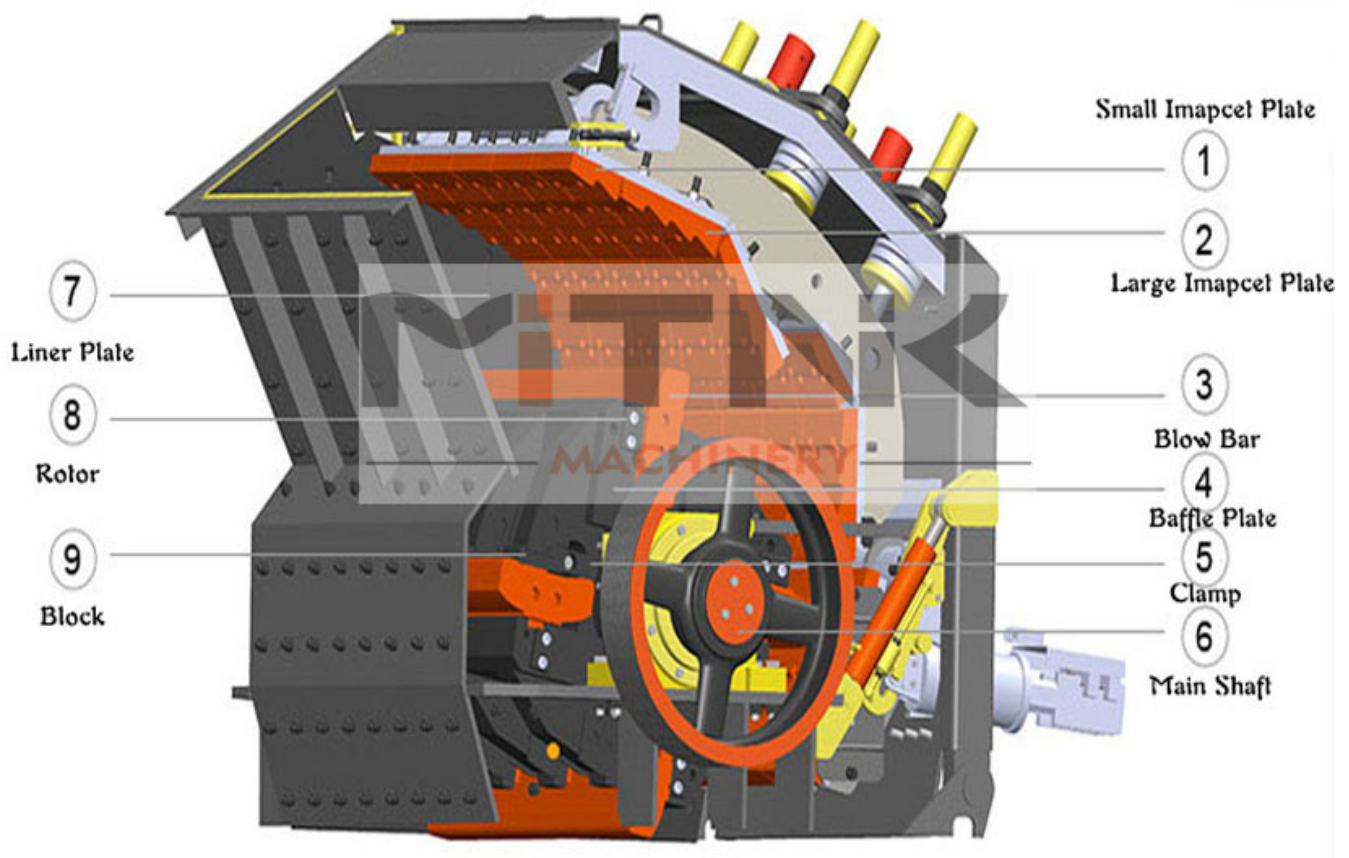

The world-class manufacturing technology, using the top production materials. heavy industrial structure rotor design, strict testing means and analysis technology, to ensure the high quality of the rotor

Unique structure, stable and reliable:

Bearing the integral cast steel structure, running more secure. Using a larger bearing specifications, the bearing capacity is higher. Unique plate hammer fixtures and higher reliability. Half automation, save time and effort

Semi automatic adjustment device and bring the open top of device, can rapidly complete the replacement of wearing parts, reduce downtime and maintenance time, saves the manpower operation, increases the safety factor.
