
MITNIK YHZ50 Portable Concrete Mixing Plant With 50T/H

THE INTRODUCTION OF CONCRETE STRUCTURE MACHINE

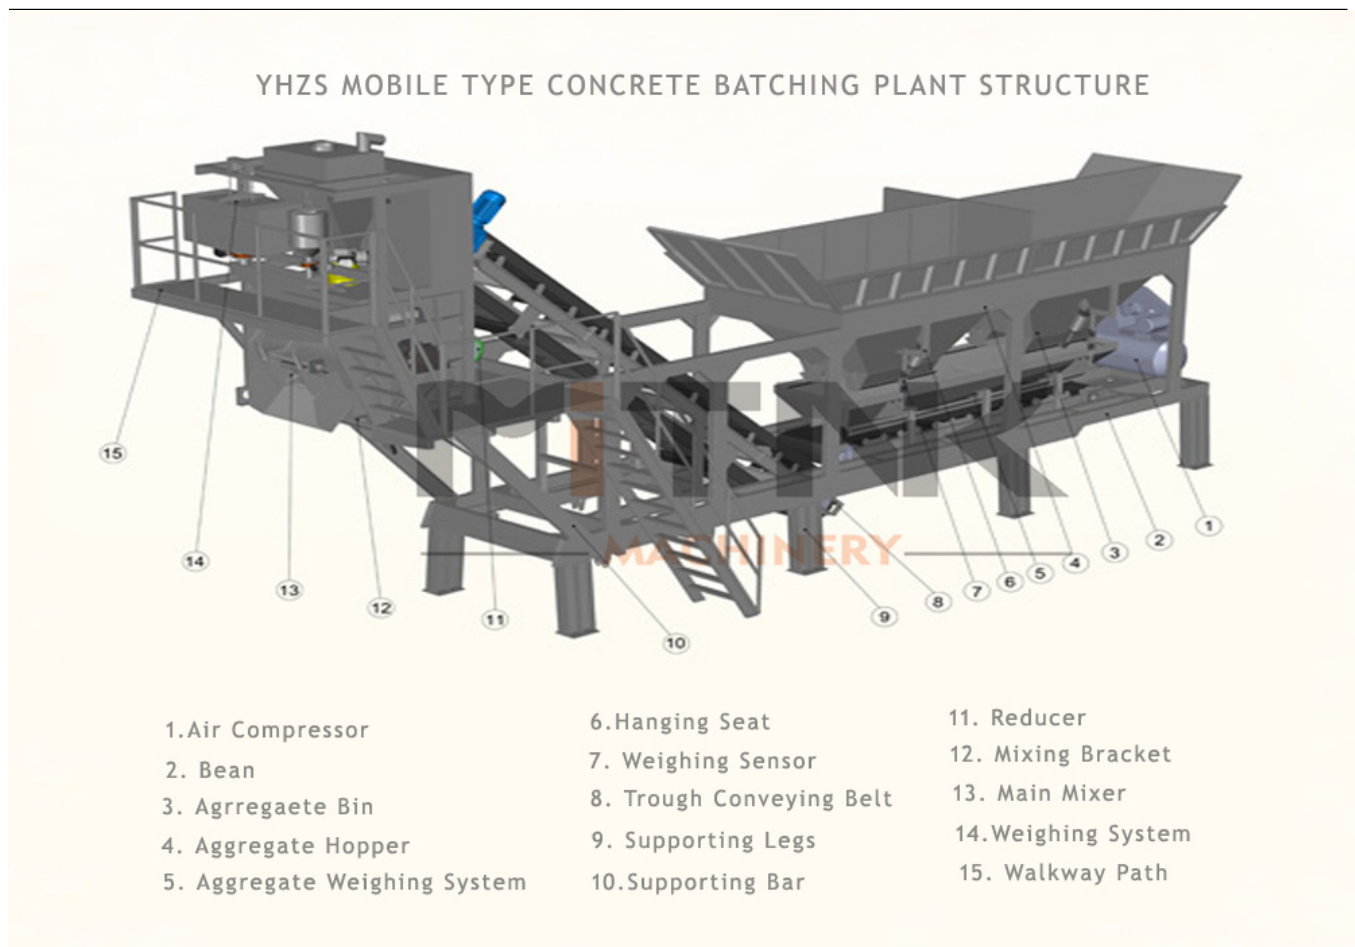

PORTABLE CONCRETE MIXING PLANT

YHZ50 series portable concrete mixing plant is the application of advanced technology and scientific research at home and abroad, combined with many years experience in the production of concrete machine. The design of a new type of mobile concrete mixing plant, is the ideal mobile mixing plant, design reasonable, compact in a trailer chassis completed most of the mixing plant station function; collecting materials, electronic weighing, hoisting, stirring into an organic whole, a pull away, stop using, mobile convenience, easy installation, very suitable for all kinds of roads, Bridges, dam, airports and other mobile site and building construction and other production bases.

The mobile cement batching plant is equipped with the tyres and traction pin to the trailer to drag allows a top speed of 60 km/hour. The total weight of all the equipment 23.5 tons mobile concrete mixing station and move when standing with all attachment removed at a time.

THE PORTABLE CEMENT MIXING PLANT SIMPLE STRUCTURE:

THE BEST FEATURES OF PORTABLE CEMENT MIXING PLANT

1. Using forced and twin shaft mixer JS series, can achieve even mixing stir with the shortest time. For harsh, half dry rigid, plastic and all kinds of proportioning of concrete can achieve good agitation.
2. Mobile concrete mixing station configuration of high-grade, high reliability and measuring precision, easy to operate.
3. Main concrete mixer reducer, measuring sensor, and the control system of main electrical components adopt international famous brand components, greatly reduces the equipment failure rate, improve the cement equipment measuring accuracy.
4. The machine adopts computer control, can also can manual operation, automatic operation is simple, easy to master.
5. Dynamic panel displays, can clearly understand the operating condition of the parts, can be stored, printed reports data at the same time, provides great convenience for production scheduling management.

6. The overall structure designed for pull-type, ingredients conveyor, mixing console, the weighing system, screw conveyor and powder storehouse to the whole structure. The rapid transitions in disassembly, installation, transportation is convenient and fast.
